Honestly one of the sweetest, most passionate professors you will ever have. He explains difficult concepts in such a simple way and makes sure that students understand what he's saying. I personally found the class very difficult but it had more to do with the content itself. No curve on exams. Large weight on assignments/quizzes/capstone project.

This class is actually lab-heavy: 70% of your grade is based on your lab activities (GLE, capstone, attendance), and the tests are 30% - so as long as you do well in your lab activities, the tests will not screw you. He's an awesome guy who encourages questions and is great when explaining. I can tell that he absolutely loves sharing knowledge.

I took his summer 312 and it was genuinely a great experience. His sections always fill up during the semester and I understand why. He was very accommodating when stuff came up and the TA's were decently generous with grading. His expectations were very clear and you get bonus points if you submit assignments a couple days before the deadline.

Online lectures, in person lab. Programming assignments and lab exercises can take time, but they give the testing script. Lectures are thorough and lab is a great time to ask TAs for help. Turning in programming assignments before a certain date can give 3% extra credit. For exams, there is a coding and a canvas exam and both are open note.

DIFFICULTY

3.0

This is by far the best professor to take for 221. The lecture portion was completely online but the labs were in person. The programming assignments and lab exercises do take quite a bit of time, but the test cases are given so you know what you will get when you turn them in (not including the report). Also the "exams" are open note and are easy.

The tests are kinda hard. His lectures are great despite them being online and prerecorded. He explains things in very simple ways which makes difficult topics very understandable. It's almost like he remembers what it's like to not already have a PhD in his field... This is something many other engineering professors have seemingly forgotten.

It is already well-established that Dr. Tyagi is an incredible professor. Last semester, I took his 312 class and it was honestly a disaster (for a variety of reasons, I believe). At the end of last semester, I emailed him with some suggestions and critiques and he actually implemented some of them in the 313 class. Not many teachers do this. A+!

I had Dr. Tyagi last semester for CSCE 312 and he is hands down the best professor I've ever had. His class is quite difficult but it is very rewarding. He explains concepts very clearly and is very articulate in the way he explains it. He also worked in the industry before becoming a professor so he understands how computing works in the industry.

Dr. Tyagi is so clear and explains things very well. He has a huge amount of industry experience at Intel making him one of the best professors for a hardware class. He is so nice too!

DIFFICULTY

3.0

Lectures were crystal clear, and his priority was to make sure we understood the material. He also gave us a very reasonable amount of homework, understanding that we were on a compressed time schedule in the summer. Stayed after class to help, and is overall a kind person. It was a privilege to take him. One of the best profs I've ever had.

He is such a nice guy! This class was relatively difficult and I feel like I did not really learn anything in class. He is very helpful outside of class.

job teaching. Would go out of my way to take classes taught by him. The projects were very challenging but supposedly that's getting revised for future semesters. No accent to worry about.
