Dr. Lee is a great prof! She's very sweet and explains concepts well if you ask questions. She can move fast, but she's happy to slow down and help. Quizzes and exercises are similar to exams and covered in class. Since exams are all MCQ and pull from hw and class material, it isn't hard to do well in the class. She also gives out extra credit.

The professor cannot teach. She reads math off of slides; I mean who does that? There are regular practice quizzes, and the homework is typed in latex and is graded quickly, but no feedback is provided. The class is easy if you are willing to learn on your

own. The videos and slides are useless as she copies the textbook; reading the book is better

For the actual understanding of material, I didn't get anything out of her lectures. There's an easier way to explain everything she teaches. However, she gives a lot of opportunities for bonus points/extra credit, and the exams are very similar to the quizzes. So, getting a good letter grade is definitely achievable. She's also very accessible.

I really recommend taking Dr. Lee's class. She always manages to brighten up the classroom with her infectious happiness. She tries her best to teach her students with a smile. She even brought us chocolates for valentine's day :). Dr. Lee definitely gave us a lot of homework but it really helped me w/ learning the material. AND curves/ec galore!

I kept looking at Dr. Lee's reviews thinking somebody else would say it, and no one ever did. Dr. Lee is an absolute inspiration. It's easy to go to lecture and get bogged down into a subject, but Dr. Lee made the class rejuvenating. The work load gets easier, she is great when it comes to ex. credit, and she makes me want to be a better CSCE major

She's a pretty good prof. She goes over everything that's on the hw, gives a list of what's going to be on the exams, and is plenty willing to work with her

students. I didn't super love her lectures, but she posts slides and answer keys that are pretty helpful!

Submit all the homework and any extra credit she offer. I highly recommend doing the homework progressively throughout the week to prevent cramming the day before it is due. Go to class. She can be very hard to understand at times because of her accent and inability to understand that we can't read novels off ppts and retain all the information.

Do the homework. Exams are tough but its over her lecture and class work so if you attend class and do the in class work you will be okay. Shes very nice, and sweet. Sometimes she will give extra credit or curve.

To take her you need to copy all of the notes from the powerpoints, sit in the front of the class. Actually do the homework instead of cheggging it. And as for the test, the questions will come from the homework and the powerpoints. Like directly.

Dr. Lee cares about her students and want them to learn. I found her hard to understand and did not get very much out of her lectures. I watched a lot of youtube videos and spent a lot of time in TA office hours. She wants you to really understand the proofs she goes over.

Dr. Lee is one of my favorite professors for CSCE courses. Her assignments are tough, but she is probably the most helpful professor outside of class that I've taken. I had her for 222 and made sure to get her for 314 as well. I definitely recommend her.

The class is pretty difficult. There are about 8 homeworks and you have to type it in latex. Also there is a quiz almost every day. The tests, she expected almost a masterly level of understanding. I feel the material is not hard but the way she taught it was very difficult to understand. She is a nice lady though. No curve for the summer session.

Lee is a decent professor, her accent is a little thick but understandable. Her class is a very difficult one and she moves fast so pay attention or you will be lost. She assigns a lot of homework so make sure you start it early. She doesn't like laziness so don't expect her to cut you any slack, you definitely have to work for it.

learn, she does have an accent but you can clear hear her. The problem was the proofs, she would take the whole 50 min class to deeply explain one proof and when the tests and quizzes came around it would be done a whole lot differently. Expect to be reading that book if you want an A.

Hard to follow her lectures, but Dr. Lee is really sweet and wants her students to learn. With additional help and reading outside of class, it's possible to make an A or B.
