Read all of his reviews, look at the votes, and realize this is the worst prof at A&M. Convolutd grading criteria, condescending and mean-spirited, no real-world experience, overly harsh grading and grade drops, treats classes like they are worth 6+ credit hrs, unreceptive to feedback, rudely addresses questions. Run, and count your blessings.

I recommend not taking a class for the semester if he is the only professor. He would change rubrics before an assignment was due without warning. He would drop you a letter grade if you fail any grading segments which was used to enforce tedious 1% assignments. And on the final project, meets expectations was worth a C. And more but word limit.

Dr. Ritchey is a smart guy but he is not a teacher. He has no idea how to deal with students or teach them. Most of the time when students are lost because of his teaching he just gets frustrated and tells them they weren't listening and aren't trying hard enough. Do yourself a favor and take any other professor unless you are skilled at comp sci.

The other ratings saying he's a nice person are kind of confusing, because when I took his class, he constantly seemed angry, and would frequently yell at and belittle students who asked questions he thought they should already know the answers to. (Without explaining the answer, of course. Female students seemed to get the worst of it.)

CSCE 221 was the most disorganized class I have ever taken. Our grade heavily depended on PAs where 7 of the 10 assignments were jammed into the last two months of the class (final examination season). It got so bad to where the class GroupMe tried to reach contact upper administration to implore the disarray of the course organization.

Great intro class to cybersecurity. Dr. Ritchey was upfront about expectations, and taught asynchronously. That is, he posted lectures for each module and it was on you to watch and read the book. Tests and quizzes were open book, with unlimited attempts for the quizzes. Homeworks took a little bit of time, but nothing bad. Highly recommend.

His teaching was absolutely phenomenal. I have no complaints about his lectures or his teaching style. The problem lies in his grading system and the fact that he piled multiple projects on the week of finals. If he just stuck to an non-retarded grading system, he would probably be the best teacher there is.

This class is like the survival of the fittest. If you don't work hard you will probably end up dropping the course. Professor Ritchey actually taught me so much and made me work hard for my grade, but in the end the efforts didn't reflect the grade I got in the class. I would say avoid this professor if you can.

SKIP CLASS? YOU WON'T PASS.

The class is very difficult no matter who you take, but Dr. Ritchey wouldn't be my first choice. He is a very smart guy who does care about his students, but demands a lot. He goes in a different order than the other 222 classes, and the tests are hard. It is a very hard class and he tells you that, but he makes things unnecessarily hard.

Ritchey was great, the class itself is hard. No matter who you take the material is going to be difficult unless you're an absolute genius. He is a smart guy and the class is hard but if you work for it you'll do fine.

Ritchey seems to actually care if his students do well in the class; however, you will find that he can be snarky and a little sarcastic at times. If you don't like teachers with an attitude, don't take Ritchey, you will

find him annoying. Otherwise, he is a fair grader and he curves at the end of the semester.

He's very tough, but he will inspire you to care more about learning than about grades. Yes, GPA matters, but you're GPA is not going to get you very far if you don't actually know anything or care about anything. If you have no prior coding experience, good luck. It probably wouldn't be a bad idea to start learning now. His class is code heavy.

He is smart. Super smart. He cares about feedbacks of his students. But his class is hard. Don't choose it. Especially w/ no coding experience for 222 But if you do, here is how you survive: Read the textbook before class. Otherwise you will have no idea what his lecture is about. His lectures will show his power after you learn the content.

I think all ENGR 112 classes are tough no matter the professor you take. I had Dr. Ritchey for honors, and felt it was fine. I think it was the curriculum of the class that made the class difficult and not the professors. He had us do assignments other professors didn't give. He really likes computer science so expect to be coding a lot.

Dr. Ritchey is a really good professor for computer science classes, but he seems relatively new to the ENGR111/112 system. Overall he's a great prof. I took him last semester and this one. I plan to take him yet again for CSCE222 next fall too!

Never really told us when things were due. That caused lots of frustration. But you could email him and he usually responded quickly. Expected a lot out of us without teaching it. MATLAB and LabView are hard... we never got lessons on them but were basically expected to be experts on how to program. Good curve at the end, but would not recommend.

ENGR 111 is supposed to be a rough class and Dr. Ritchey forces you to learn with lots of work (most of it is incorporated in all the classes, but it's enforced here). You have to put your time in and you'll learn your stuff. C'mon this is HNRS. Tough tests, but mass curves. I know for a fact (using excel spdsheet) 78 AVG was an A for a friend.

He isn't a good professor, and I did not enjoy his class. The class is intensely frustrating, and Dr. Ritchey was no help at all. He rarely answers questions, only offering vague explanations that don't help at all. Assignments are very unclear and ambiguous. There is a lot of very hard (programming) hw; he enjoys our pain, seriously.

Dr. Ritchey assigns Readiness Assessment Tests (RATs) for nearly every class. Many complain about his "pop quizzes," but all of the material you need to know for the RATs is on the syllabus. Expect to make 70s on the RATs, and still do great in the class. He demonstrates with examples and works with you if you have questions. Quick at emailing.

Dr. Ritchey is the hardest professor you will ever have. His class goes faster than any other CSCE 222 class and he covers chapters others don't cover. He will only go over the math of what you are doing and assume you know why you are doing the math (and therefore can apply the math in any situation). The homework takes forever to do. STAY AWAY
