Lightfoot is a great professor. You can tell a lot of the material in the course is AI-generated, but it actually makes the class really straightforward and easy to follow. You always know what to expect, and the exams match the study material well. Not too heavy content-wise, especially if you've seen some of it before. Overall, solid class.

There's a knowledge check every Tuesday, so attendance matters. However, he does give you a lot of chances to succeed. The final isn't bad, but you need to be 100% precise in your answers, otherwise you'll get points off. That being said, the homework and in-class assignments are easy as long as you pay attention and use all available resources.

Not sure why his rating is average on here. He is a great professor, and yes he has in class assignments but they genuinely help you learn. Before the exam he gives a knowledge check in class which gives u questions extremely similar to the exam. Yes you have to go to class but all assignments are doable and you leave 30 minutes early most days.

Lightfoot is an AWESOME prof. With amazing TAs! He made the class fun, but it's still not a walk in the park. He is caring and will extend deadlines if you ask. Go to class he will code some of the hw there, and there are group projects. If you work hard you will get the grade you deserve. Written while wondering what comp sci class to take next.

This class is hard regardless of your prof. The course is not designed so that you will be taught in lecture, rather by doing the projects. Expect stringency, not pity. The projects are hard and take 10+ hours of work a week to get a B. Getting a good group is more important than the prof for this course.

Loved him. Made everything easy to understand and there is clear grading material. Lots of extra credit. If you don't pass it is because you are lazy.

I mean I dont think he's that great teaching wise, you are just paying this school so you can then buy the ZyBooks to learn Java on your own. The class is easy and the staff are all knowledgeable. But in the end, I think it's the class and the way its organized thats easy. Loads of hw but no exams, so I'd take this class anyday

Professor Lightfoot made sure that the transition to online learning was as seamless as possible, while also having in person classes. You have 2 weekly in class assignments and coddig homework. This was manageable compared to ENGR101. I went into this class dreading coddig and ended up enjoying this class. 10/10 recommend him.

this professor is amazing. hands down one of the most caring professors I have ever had. I have had very few professors I genuinely felt comfortable asking questions to but he was one of the best. the class itself sucks but with any other professor its the worst class imaginable. got a D taking it with another prof and an A with lightfoot. take him

Professor Lightfoot is the best professor I have ever had. This class was in no way easy but he made it enjoyable. Anytime that I emailed him or met with him in office hours, he explained things very clearly and did more than enough to help through assignments. Would definitely take again!

Dr. Lightfoot is one of those gems who really cares more about you learning than a grade. No exams for this reason. He wants his students to appreciate the material, so there are assignments that allow for personal research on how coding is used everyday. The projects are fun in my opinion. He started every 8am with a music video!! Great professor

The instructions aren't particularly clear for labs, but they are graded fairly. There are no tests. I don't think his lectures are particularly useful and at times they seem like they're made up on the spot. He's a nice guy, but I can't say I learned much. I got a high A with little effort.

No exams. Attendance is mandatory. Weekly exercises and weekly discussion boards. These exercises look complicated but once you get the idea of the assignment, it is a breeze. You can make up for full credit if you fix your mistakes. Lightfoot is an amazing professor. He cares and helps all the time with the assignments.

Lightfoot is easily one of the most disorganized professors I have ever taken. You can get an A easily if you do all of the work--this class has the most busy-work you will ever find yourself doing in college--on time and show up for class. I always got the impression he didn't like me because he would just stare blankly at me with this judgy look

As long as you do the work, you will get an A. He groups us together for projects, and we are never on our own. The labs allow us to get our work done with the help of TAs. The hardest part of this class is getting

the homework done, as there is a lot if it, but it's all for good practice, and you will be well on your way to learning .java

I came in with no Java experience and it was frustrating. Lightfoot teaches using examples not slideshows, and in truth you're going to have to learn for yourself online. There are 2 group projects, 13 weekly coding exercises, 13 weekly "gather quizzes", and attendance. This is how you are graded. Although all around it's an easy A for a class.

This class gave me a really good overview of the different aspects of computer science. We did a lot of different projects where we learned java and the basics of html. The weekly assignments were fairly easy and didn't take that much time to complete. Professor Lightfoot enjoys teaching this class and you can tell. Go to class, attendance matters!

Attendance is graded because there are no exams. Weekly coding assignments were manageable and he loves using quizzes where students find different sources about a topic and write 2-3 paragraphs for a response that all students can view in the ecampus class forum. He is friendly and is passionate about this class. Absolutely loved this class!!

Dr. Lightfoot is undoubtedly my favorite professor/living being on the planet. He genuinely cares for every student and will go above and beyond to help with any question or concern. The class itself was not too difficult, and Dr. Lightfoot made showing up at 8 a.m totally worth it. The second day of class, he played the Game of Thrones theme song

Weekly coding assignments account for the majority of the final grade, and they're always doable. There's also 2 weekly "quizzes" where you write a paragraph about certain topics, and 2 group projects. Dr. Lightfoot (and his graders) are generous with extra credit on homework assignments if you go above and beyond. Attendance is 10% of the grade.

Honestly the easiest class I've had at A&M so far. All of the coding projects are really interesting and if you're guilty of being easily distracted in class, lots of the materials can be googled and helped with stackoverflows. 1 coding project and 2 easy group discussion every week, and NO EXAM. Take him!!

Dr. Lightfoot is such a good guy. He was always available to help us out, didn't believe in exams (yay), and was just overall a super sweet man. He even played jokes on us during class. He has a cybersecurity background which made the class interesting as well. You will have group projects, and go to class - there isn't a textbook. TAKE HIM!

He is by far one of the best professors I've ever had, he truly cares for his students and them learning Java. The class doesn't have tests, just about 3 weekly assignments that are super easy and very straight forward. I've learned a lot from this class, and I look forward to going to class. I'd take him again!

He is an amazing professor. Really taught you how to use Java in a modern way without the need of a textbook. It is an easy class if you do all the assignments and quizzes as well as attend lab and lecture. He notices when students go above and beyond on the weekly exercises. I recommend this professor to everyone, especially beginners.
